RE: ITB #7119 - Liquid Carbon Dioxide

Dear Council Members:

The chemical above is one of the major treatment chemicals requiring your consideration for passage. This bulk chemical is required to remove various impurities from the river water to convert the water to a drinkable condition referred to as "Potable." The Liquid Carbon Dioxide is utilized to enhance removal of impurities. It is added to water after the lime-softening process to lower the pH in order to reduce calcium carbonate scale formation. This process is known as recarbonation. Without this chemical we cannot treat the water to make it potable. If you have any further questions, please call me at 427-1254.

Very truly yours,

Doug Pooler, Superintendent
Filtration Plant
